## KEY FEATURES

### Exceptional Seaworthiness

Innovative and efficient low drag hull form with long waterlines, fine bow and flared topsides provides an exceptional seaworthy, soft, dry ride.

### Low fuel Consumption

Super efficient low drag hull only requires moderate engine horsepower. A 115hp outboard produces over 60 km/hr of performance whilst keeping fuel consumption to a minimum.

### Dynamic Stability

Strategically placed hull bottom strakes provide lift, reduce surface friction and improve dynamic stability.

### Enhanced Stability

Large flat chines aft provide excellent at rest stability.

### Unrestricted Visibility

Central pod arrangement provides comfort, shelter and large storage whilst allowing full walk around use of the boat and unrestricted visibility, as well as permanent comfortable seating for six.

### Durability

Hand laid multi axle fibreglass construction provides a very strong, stiff structure.

### Innovative Options

Variety of options available - open boat or hard top. Hard top can be fixed or retractable.

## SPECIFICATIONS

Length Overall	6.60 metres
Beam	2.30 metres
Recommended HP	115 - 150
Integral Fuel Tank	140 litres
Maximum Load	870 kg
Dry Hull Weight	930 kg
Approx Tow Weight	1680 kg
Height On Trailer Hard Top Up	2.70 metres
Height On Trailer Hard Top Retracted	2.10 metres
